Disruptive Innovation and the Global Emergence of Hybrid Corporate Legal Structures
European Company Law

European Company Law (ECL) is published under the aegis of the Centre for European Company Law (CECL), an academic partnership of the Universities of Leiden, Utrecht, Maastricht, the Netherlands, Upsala (Sweden) and Rome, IUSLU Guido Carli (Italy) (www.ecl.nl). The purpose of CECL is to further the study of company law by focusing on supranational issues. This include both developments in the EU and on other international levels, as well as comparative law. Leiden University acts as the leading partner in CECL, with Professor Steef M. Bartmans, as coordinating director. ECL is aiming to be interesting for both practising and academic lawyers in the field of European company law.

There are six issues of ECL per year. Two of these (April and October) concentrate on specific topics. The other issues contain articles on various subjects and may also include country reports of a general nature, highlighting important developments in a number of EU jurisdictions, as well as columns that offer summaries of recent EU legislation, ECLI case law and of selected articles from various national legal periodicals.

**European Company Law Law**

Bartman, as coordinating director. ECL aims to be interesting for both practising and academic lawyers in the field of European company law.

**Publications**

European Company Law has been designed to be the ideal working tool for all corporate lawyers with a European practice. The journal deals with European company law in a broad sense, including such topics as codetermination law, insolvency law and securities law. All contributions should follow ECLI’s SCIP-principle, which welcomes articles that are scientific, concise, informative and practical.

**Contact Details**

Manuscripts should be submitted to ECL’s main editor, e-mail: s.m.bartman@law.leidenuniv.nl and to its editorial secretary, e-mail: c.d.groot@law.leidenuniv.nl

**Submission Guidelines**

1. Manuscripts should be submitted electronically, in Word format, via e-mail.
2. Submitted manuscripts are understood to be final versions. They must not have been published or submitted for publication elsewhere.
3. Contributions should have a range of approximately 4,000 to 5,000 words (footnotes excluded).
4. Only articles in English will be considered for publication. Manuscripts should be written in standard English, while using "ise" and "isation" instead of "ice" and "isation". Preferred reference source is the Oxford English Dictionary. However, in case of quotations the original spelling should be maintained. In case the complete article is written by an American author, US spelling may also be used.
5. The article should contain an abstract, a short summary of about 100 words. This abstract will also be added to the free search zone of the Kluwer Online database.
6. A brief biographical note, including both the current affiliation as well as the e-mail address of the author(s), should be provided in the first footnote of the manuscript. An article title should be concise, with a maximum of 70 characters.
7. Special attention should be paid to quotations, footnotes, and references. All citations and quotations must be verified before submission of the manuscript. The accuracy of the contribution is the responsibility of the author. The journal has adopted the Association of Legal Writing Directors (ALWD) legal citation style to ensure uniformity. Citations should not appear in the text but in the footnotes. Footnotes should be numbered consecutively, using the footnote function in Word so that if any footnotes are added or deleted the others are automatically renumbered.
8. Authors must make sure that abbreviations are explained when used for the first time.
9. Tables should be self-explanatory and their content should not be repeated in the text. Do not tabulate unnecessarily. Tables should be numbered and should include concise titles.

**For further information on style, see the House Style Guide on the website: www.kluwerlaw.com/ContactUs/**

**Review Process**

1. Before submission to the publisher, manuscripts will be reviewed by the Board of Editors and may be returned to the author for revision. The journal’s policy is to avert an initial assessment of the submission within thirty days of receiving the posted submission. In cases where the article is externally referred for review, this period may be extended.
2. The editors reserve the right to make alterations as to style, punctuation, grammar, etc.
3. In general the author will not receive proofs of the article. Proofreading will be carried out by the Board of Editors.

**Copyright**

[1] Publication in the journal is subject to authors signing a ‘ Consent to Publish and Transfer of Copyright’ form.

[2] The following rights remain reserved to the author: the right to make copies and distribute copies (including via e-mail) of the contribution for own personal use, including for own classroom teaching use and to research colleagues, for personal use by such colleagues, and the right to present the contribution at meetings or conferences and to distribute copies of the contribution to the distributors attending the meeting, the right to post the contribution on the author’s personal or institutional website or server, provided acknowledgment is given to the original source of publication; for the author’s employer, if the contribution is a ‘work for hire’, made within the scope of the author's employment, the right to use all or part of the contribution for other intra-company use (e.g. training), including by posting the contribution on secure, internal corporate intranets; and the right to use the contribution for further career by including the contribution in other publications such as a dissertation and/or a collection of articles provided acknowledgment is given to the original source of publication.

[3] The author shall reserve the rights granted (subject to signing the ‘Consent to Publish and Transfer of Copyright’ form) two free copies of the issue of the journal in which the article is published, plus a PDF file of higher article.

<td>Reforming Company Law for Sustainable Companies</td>
<td></td>
</tr>
<tr>
<td></td>
<td>In the discussion on making companies act more sustainable, one of the most neglected fields of law is company law. In the Sustainable Companies Research Project of Oslo University, researchers from 25 jurisdictions have explored which barriers and possibilities exist to utilize company law for creating sustainable companies. In the final conference, the researchers presented proposals for law reform. Several of these ideas have been captured in the short articles in this ECL issue. Lambooy summarizes the themes and explains how they interrelate.</td>

Improving the Legal Environment for Social Entrepreneurship in Europe

In the light of the definition communicated by the European Commission concerning social entrepreneurship, this article discusses three corporate structures which were introduced to better support and enable social enterprises in Belgium, the UK and Greece. Drawing on inspiration from these national corporate laws, this article reflects on their innovative approaches regarding corporate purpose, corporate governance and accountability applicable to social enterprises

Tineke Lambooy & Aikaterini Argyrou

Stopping Jurisdictional Arbitrage by Multinational Companies: A National Solution?

In Albania there is a company group system allowing all of the subsidiaries and the parent company to be sued by creditors. A ‘Control Group’ is defined as where ‘one company regularly behaves and acts subject to the directions or instructions of another company’ without a shareholder relationship between the companies. If other jurisdictions could follow it would allow more transparency and accountability for multinational companies

Janet Dine

Comprehensive Management and Financial and Extra-financial Risk Control to Overcome the Business Crisis

The crisis is an opportunity for a change in the management models, which may contribute a greater efficiency and effectiveness of political strategies and processes in organisations. Taking into account every risk holistically and seeking a sustainable management, this article explores how an organization may include financial and extra-financial variables in the risk management in order to create sustainable value over the long term

María Ángeles Fernández-Izquierdo, María Jesús Muñoz-Torres & Idoya Ferrero-Ferrer

Due Diligence: A Compliance Standard for Responsible European Companies

After decades of debate, new global norms are emerging in the field of human rights that clearly define a company’s social responsibility. The UN and the OECD have adopted these new standards which impose a due diligence duty on companies to avoid human rights abuses related to the corporate activities. But how well do the new standards fit with existing European law and policy governing responsible business? The paper examines some recent comparative law research, including topical legislation recently proposed in France

Mark B. Taylor
Sustainable Companies through Enlightened Boards: Combining Private and Public Interest in the Decision-Making of Large Public Firms

This article is centred on the proposal of a new institutional structure for board of directors of large public firms. The proposal is envisaged as an ex ante means to address problems of decision-making within corporations whose activities impact on a wider range of societal constituencies and pose issues of sustainability for society at large. The proposed structure aims at recalibrating boards’ functions in light of more socially inclusive and sustainable goals

Vincenzo Bavoso

Operationalizing Sustainability in Company Law Reform through a Labour-Centred Approach: A UK Perspective

As companies with global operations adopt increasingly more innovative forms of organisation this paper assesses how this affects company law reform designed to enhance sustainability. Utilising a labour orientated interpretation of Coase’s transaction costs theory it argues that companies adopt forms which best extract value from labour. The paper therefore suggests that improved labour governance initiatives would help resist companies’ ability to sidestep reform

How Might Network Governance Found in Nature Protect Nature?

A compelling incentive for firms to protect the environment is created by executive remuneration and tenure being based on Key Performance Indicators determined by environmentalists. This requires amending corporate constitutions to separate the power to manage the business from the power to govern the firm. Network governance, as used by nature, could then be introduced to make the connections to protect nature

Shann Turnbull

The EU’s Shareholder Empowerment Model in the Context of the Sustainable Companies Agenda

This article examines the current EU company law policy promoting shareholder engagement in the context of the Sustainable Companies Agenda. It suggests that affording greater power to shareholders and encouraging greater engagement may not advance the Agenda unless shareholders anticipate a direct personal financial benefit. The article also raises the possibility that such a policy could impede progress by the adoption by shareholders of a short-termist approach to the company’s operations

Integrated Reporting for Sustainable Companies: What to Encourage and What to Avoid

This article explains the concept of integrated reporting as a sustainable development mechanism. It warns against capture by market actors and urges greater involvement of stakeholders, NGOs and civil society in the development of the framework for integrated reporting. A system of assurance is also required.

Charlotte Villiers

121

Regulating Accounting for Sustainable Companies: Some Considerations on the Forthcoming EU Directive

On April 2013 the EU Commission published its much anticipated proposal for a new Directive on 'non-financial reporting'. The article suggests that the framework used by the Commission is rather weak and improvements are proposed. It maintains that national sustainability codes could be developed and the attention should shift to regulate large institutional investors’ reporting.

Disruptive Innovation and the Global Emergence of Hybrid Corporate Legal Structures

CAROL LIAO, PHD/CANDIDATE, UNIVERSITY OF BRITISH COLUMBIA AND UNIVERSITY OF TORONTO, AND INCOMING ASSISTANT PROFESSOR, UNIVERSITY OF VICTORIA

1. TRANSFORMING THE CONCEPT OF CSR

The incredible power of corporations to exert pressure and influence over societal flourishing frequently leads to calls for reform, as the ongoing pursuit for greater profit often conflicts with sustainable performance. It is clear that shareholder primacy needs to change – but how? Critical ideas on how to transform the modern day corporation must press forward, as contributions to this Special Issue can attest. But achieving true corporate ‘reform’, which by definition means to improve upon what currently exists, is a complex and multifaceted exercise. In addition to social, political, and economic barriers that arise, reform efforts invite incrementalism and satisficing, and may encounter regulatory capture and other factors that contribute to path dependence and complacency. In order to overcome these effects, destabilizing innovations may be necessary.

While the expansion of Corporate Social Responsibility (CSR) in recent years has been effective in tempering some of the negative externalities that arise under shareholder primacy, the movement is evolving within the private sector. Large multinational corporations are still catching onto CSR, but the leaders at the forefront of the movement are transforming the concept of CSR into one of ‘social innovation’ and the integration of business practices with social activism. The growth of the social enterprise, a definition with no legal meaning that commonly refers to either a for-profit corporation trying to do social good, or an enterprising non-profit organization, is beginning to generate statutory responses in several countries. Legislators are beginning to create new corporate forms with legal features that support this burgeoning field.

This article promotes an atypical reform proposal that focuses on how a growing trend in corporate law may enable disruptive, bottom-up innovations in the marketplace that, in combination with top-down regulatory reform, will contribute to an environment where sustainable companies become the norm. The global emergence of corporate hybrid legal structures blending both for-profit and non-profit legal characteristics in their governance design marks the beginning of a new chapter in corporate law. Community and social benefit purposes, restrictions on dividends, community purpose asset locks, and benefit enforcement proceedings to protect stakeholder interests are only some of the interesting governing features within these models. With correct strategic implementation, these corporate hybrids may have the potential to challenge the status quo and pressure mainstream corporations to change how they operate.

2. GLOBAL TREND OF CORPORATE HYBRIDITY

Corporate hybrids as legal innovations have received little analysis from scholars to date because they are very new institutional phenomena, and even less so in terms of their social change capabilities. There is no formal definition of what a ‘hybrid’ constitutes. For the purposes of this article, a hybrid is a corporate entity that embodies legal tools which require and/or encourage the pursuit of dual economic and social mandates within businesses.

By converting into a hybrid, former charities and non-profit organizations may attract venture capital and make a profit, lessening their dependence of public funds and enabling better use of the market to disseminate social products and services. On the

1 Incrementalism and satisficing are not negative attributes per se, but incremental reforms may never provide the substantial change that reformers seek, and along with satisficing may even deter the development of innovative ideas. Herbert A Simon, Models of Man: Social and Rational (John Wiley and Sons, Inc. 1957) (where satisficing is described as a settling for an adequate but not optimal solution); see also Cristie Ford, New Governance in the Teeth of Human Frailty: Lessons from the Global Financial Crisis, 2 Wisc LR 101 (2010) (for a modern day discussion of satisficing in relation to regulatory reform).
other hand, profit-conscious businesses that convert into a hybrid are presumably better able to integrate stakeholder interests, social mandates, and sustainable practices into their business models well beyond what is tolerable under shareholder primacy. The emergence and development of hybrid models provides a new institutional tool for the CSR movement. Hybrids are providing opportunities for entrepreneurs seeking to house social enterprises in legal structures that can support their needs while affirming that ‘the independence of social value and commercial revenue creation is a myth.’

The Community Interest Company (CIC) was the first model to appear in the new generation of hybrids. Implemented in the United Kingdom in 2005, CICs are established to trade goods or services for the community interest. The most noteworthy features in the CIC are its asset lock and dividend cap. The asset lock restricts CIC assets and profits from being transferred out of the CIC unless the transfer is for full fair market value (to ensure the CIC continues to retain the value of the assets transferred), or is transferred to another CIC subject to an asset lock or a charity, or is otherwise made for a community benefit. Dividends on CIC shares and interest on bonds are capped to ensure that profits are either retained by the CIC or used for a community benefit purpose. In addition to these features, CICs have annual reporting requirements where they must account for how their CIC has benefited the community and engaged stakeholders.

In terms of its success, there are no statistics available on CICs’ monetary contributions to the UK economy, the average size of CICs, or total members. Simply based on numbers, the UK CICs doubled in 2011 and 2012 and at the end of 2013, there were over 8,700 recorded CICs. It is reported that over 100 new CICs are registered every month, and a considerable number of CICs have survived the three-year mark. The perceived success of the UK CIC may be what has motivated other countries to follow suit. In Canada, the British Columbia provincial government announced the creation of the community contribution company in 2013, which is modelled after the UK CIC, and the Nova Scotia provincial government has also announced the creation of its own community interest company. A few other countries have also indicated an interest in the CIC model, including Japan and South Korea.

In addition to the CIC, other hybrid models have been explored internationally. The first American hybrid, the low-profit limited liability company, appeared in 2008 in the state of Vermont and has subsequently been adopted in eight other states and two federal jurisdictions, although its numbers have plateaued around the 800 mark. Another American hybrid, the benefit corporation, appeared in 2010 in the state of Maryland and has since been adopted in twenty states. Greece, as well, enacted the Law on Social Entrepreneurship and Social Economy in 2011, which introduced the social cooperative enterprise as the new sole form of cooperative belonging to its social economy. Denmark and Belgium and several other countries have also crafted laws supporting social enterprises within their borders, or are in the process of doing so.

5 This article focuses on the new generation of corporate hybrids that have appeared within the last decade. It does not address other models prior to this date, such as the cooperative ownership model, one of the oldest corporate structures in the world, which may be regarded by some as a hybrid since the model provides members with the flexibility to pursue social, environmental, and/or economic mandates in a collaborative manner. The cooperative model can operate under the sole objective of profit maximization if agreed upon by its members, thus there may be disagreements as to whether it is appropriately regarded as a legal ‘hybrid.’ For a discussion on the linkages between sustainability and cooperative ownership, see Hagen Henrÿ, Sustainable Development and Cooperative Law: Corporate Social Responsibility or Cooperative Social Responsibility? (2012) University of Oslo Faculty of Law Research Paper No 2012-23 http://ssrn.com/abstract=2109047 (accessed 6 Jan. 2014).

10 Regulator of Community Interest Companies, ‘Annual Report 2011/2012’ www.his.gov.uk (accessed 6 Jan. 2014). 13, 590 CICs were also dissolved, with key reasons for dissolution being ‘lack of funding, no trading activity, and poor corporate governance.’ See also the Office of the Regulator of Community Interest Companies on Twitter @TeamCIC for the latest number of CICs on public record.
17 See Lambroy, supra n 16 for a comparative study of economic structures supporting social entrepreneurship across several countries.
3. INNOVATIVE POTENTIAL

What is to be made of the rapid global development of corporate hybrid legal structures? It is early in the process – as a dynamic and evolving phenomenon, it is still undetermined what, if any, significance hybrids will have on sustainable practices and socio-economic growth. It is quite understandable for most to regard the development of hybrids as simply addressing a niche sector of the market – it is very likely that corporate hybrids will operate more as a small supplement relative to the mainstream corporate model rather than as one that may one day overtake it. But this article seeks to promote a different and somewhat novel perspective by suggesting that this growing trend in corporate law may actually increase the amount of ‘disruptive innovations’ entering the marketplace, providing a back door mechanism for reformers seeking transformative corporate change.

The concept of disruptive innovation was first coined by Joseph L. Bower and Clayton M. Christensen in 1995. While the concept is often used to refer to technological advances, it is not isolated to that industry. Bower and Christensen first classified innovations into two categories: sustaining and disruptive. Sustaining innovations are incremental improvements to products and services that provide better quality or greater functionality to consumers in the higher tiers of the market. Companies are drawn to sustaining innovations because they have been proven to be profitable. Companies attain the greatest profit margins when they charge high prices to the most demanding and sophisticated customers at the top of the market. The issue with this practice, however, is that companies unintentionally open the door to disruptive innovations. Because lower tiers of the market offer ‘lower gross margins, smaller target markets, and simpler products and services’, they are unattractive to other firms moving upward in the market, ‘creating space at the bottom of the market for new disruptive competitors to emerge’. A disruptive innovation allows a new population of consumers to access a product or service that was previously only available to wealthy or skilled consumers. Disruptive innovations ‘improve a product or service in ways that the market does not expect . . . first by designing for a different set of consumers in the new market and later by lowering prices in the existing market’. In fact, Christensen and a group of other scholars went on to describe a subset of disruptive innovations that specifically address social change. These innovations share five qualities: they (1) create systemic social change through scaling and replication; (2) meet a need that is either overserved (because the existing solution is more complex than many people require) or not served at all; (3) offer products and services that are simpler and less costly than existing alternatives and may be perceived as having a lower level of performance, but users consider them to be good enough; (4) generate resources, such as donations, grants, volunteer manpower, or intellectual capital, in ways that are initially unattractive to incumbent competitors; and (5) are often ignored or disparaged by existing players for whom the business model is unprofitable or otherwise unattractive and who therefore avoid or retreat from the market segment.

Disruptive innovations may include sustainable products or services that are made more affordable to the bottom tiers of the market, eventually displacing unsustainable products that presently dominate, as well as other goods and services that promote a more inclusive society while operating within planetary boundaries. Christensen et. al. cite specific examples such as affordable insurance, walk-in medical clinics, and microlending.

Could hybrids become the best organizational structure to promote disruptive innovations that promote social change? Hybrid businesses may have an advantage in developing innovative products and services that open up the bottom tiers of the market, addressing social needs that are unmet through traditional corporate practices due to low margins or other profit-driven limitations. They may serve as a live experiment putting to test ongoing research informing business leaders that long-term vision, sustainable purposes, and multi-stakeholder collaboration are essential for the long-term success of the firm. Despite mounting evidence, modern corporations still find it incredibly difficult to be unchained from pressures to hit quarterly earnings targets. Corporate hybrids should free businesses from this type of short-termism. Investors in hybrids will be made aware of the social mandates embodied within these entities and the particular legal limitations regarding financial upsides, if any, meaning that hybrid investors, by nature, will be social investors. Thus, the pressure for greater return at the expense of sustainable practices seems to be heavily dampened. It is therefore not unreasonable to project that hybrids are better positioned to produce sustainable products.
and services that become disruptive innovations in the marketplace.

There are, of course, risks for any jurisdiction introducing a new hybrid into the roster of corporate alternatives. Hybrids may take away resources traditionally used by charitable and non-profit organizations, and there is ongoing concern of ‘private sector intrusion into public service delivery’. There is the risk that mainstream corporations may feel they have little obligation to consider social issues or environmental concerns, which are now supposedly left for hybrids and non-profit organizations to address (but of course, these corporations may already hold the view that environmental concerns should be resolved solely by the public sector, among other reasons). Corporate regulators may also be motivated to hold similar views. Hybrids may end up satisfying a niche market that, once saturated, is ineffectual at promoting change. These are all risks that legislators must be aware of when implementing hybrids into their statutory laws.

Nevertheless, the growth of international hybrids signifies that there is something amiss with the shareholder primacy norm embodied in the mainstream model. Hybrids are quickly filling a driving legal need to house social purpose businesses and enterprises. Legislators must examine the environment and design hybrids that significantly differentiate them from other alternatives, provide meaningful legal features to ensure dual economic and social mandates can coexist, and also meet the particular needs of social entrepreneurs to make the model attractive. With proper strategic implementation, hybrids may become the new corporate legal tool that fosters ongoing disruptive innovations in the market. The potential for hybrids to illicit transformative change in the marketplace cannot be discounted, and must continue to be explored.

European Company Law

European Company Law (ECL) is published under the aegis of the Centre for European Company Law (CECL), an academic partnership of the Universities of Leiden, Utrecht, Maastricht, the Netherlands; Uppsala University (Sweden); and Rome, LUISS Guido Carli (Italy) (www.cecl.nl). The purpose of CECL is to further the study of company law by focusing on supranational issues. These include both developments in the EU and on other international levels, as well as comparative law. Leiden University acts as the leading partner in CECL, with Professor Stefan M. Bartman, as coordinating director. ECL is aiming to be of interest to both practising and academic lawyers in the field of company law.

There are six issues of ECL per year. Two of these (April and October) concentrate on specific topics. The other issues contain articles on various subjects and may also include country reports of a general nature, highlighting important developments in a number of EU jurisdictions, as well as columns that offer summaries of recent EU legislation, ECJ case law and of selected articles from various national legal periodicals.

European Company Law has been designed to be the ideal working tool for all corporate lawyers with a European practice. The journal deals with European company law in a broad sense, including such topics as corporate law, insolvency law and securities law. All contributions should follow ECL’s SCIP-principle, which welcomes articles that are scientific, concise, informative and practical.
